

PARESH PATIL

Senior SDET | QA Automation Engineer | Framework Architect

Mumbai, India • testerpareshpatil@gmail.com • github.com/pareshqapersonal-bit • pareshtester.github.io

PROFESSIONAL SUMMARY

Senior SDET with 8+ years of hands-on experience designing, building, and owning automation frameworks across frontend, backend APIs, and mobile platforms. Proven track record of building Appium and Selenium frameworks from scratch, integrating test suites into Jenkins CI/CD pipelines, and acting as quality gatekeeper across OTT streaming and Magento e-commerce products. Adept at embedding quality into delivery cycles, performing risk-based test strategy, and collaborating with engineering, DevOps, and product teams in globally distributed environments. Strong Java and API automation expertise; comfortable working on next-generation enterprise platforms with complex integration workflows.

CORE TECHNICAL SKILLS

Automation:	Java, Selenium WebDriver, Appium (built from scratch), TestNG, Maven, Page Object Model
API Testing:	Rest Assured, Postman, ClickPost Logistics API, REST/JSON validation, contract testing
CI/CD:	Jenkins (pipeline config, test integration, build triggers, failure analysis)
Frameworks:	Framework design & architecture, reusable utilities, data-driven & keyword-driven patterns
Test Strategy:	Risk-based testing, release readiness criteria, regression suite ownership, root cause analysis
Platforms:	OTT (Samsung Tizen, LG WebOS, Android TV, Fire TV, Apple TV, Vidaa OS), Android/iOS mobile
Domain:	E-commerce/Magento (Titan Eyeplus, Fastrack Eyecare), OTT streaming, logistics API
Tools:	JIRA, Git/GitHub, MongoDB validation, DRM validation, Postman collections
Scripting:	Java (primary), shell scripting for test tooling & environment setup

PROFESSIONAL EXPERIENCE

Senior QA Engineer — SDET & Automation Lead |

Fortune4 Technologies

Jan 2025 – Present Mumbai

Client: Titan Company Limited — Titan Eyeplus & Fastrack Eyecare (Magento/Adobe Commerce)

- ▶ Owned end-to-end quality across frontend web, backend APIs, and Magento e-commerce workflows for Titan's eyewear retail platforms
- ▶ Designed and executed test strategy covering functional, regression, integration, and exploratory testing across multiple release cycles
- ▶ Built and maintained API automation suite using Rest Assured and Postman; validated ClickPost logistics API integrations end to end
- ▶ Integrated automated test suites into Jenkins CI/CD pipelines, enabling fast quality feedback on every build and reducing release cycle time
- ▶ Performed root cause analysis on escaped defects and production incidents; instituted defect prevention practices across the QA team
- ▶ Defined release readiness criteria and acted as quality approver for production deployments on Titan Eyeplus and Fastrack Eyecare
- ▶ Collaborated directly with developers, product owners, and DevOps on quality-by-design practices and shift-left testing initiatives
- ▶ Mentored junior QA engineers on automation best practices, framework usage, and test documentation standards

Client: HT Media / OTTPlay — Multi-Platform OTT Streaming (Samsung Tizen, LG WebOS, Android TV, Fire TV, Apple TV, Vidaa OS)

- ▶ Built Appium mobile automation framework from scratch, covering Android and iOS apps; framework adopted across the QA team as the standard

- ▶ Owned automation architecture: designed reusable libraries, test utilities, and data-driven test patterns using Java + TestNG + Maven + POM
- ▶ Delivered comprehensive test coverage across 6 Smart TV OS platforms (Tizen, WebOS, Android TV, Fire TV, Apple TV, Vidaa OS) and mobile
- ▶ Validated DRM content protection workflows and MongoDB data integrity across OTT streaming pipelines
- ▶ Integrated Appium suites into Jenkins pipelines for continuous test execution; maintained suite stability and failure triage
- ▶ Recognised as Samsung Store SPOC — sole point of contact for Samsung Smart TV certification and quality sign-off
- ▶ Collaborated with global engineering and product teams to define acceptance criteria, identify risks, and validate complex system workflows

Associate Quality Analyst | General Data Pvt. Ltd.

Jul 2017 – Jan 2025 Pune

Web, mobile, and API testing across enterprise software products

- ▶ Designed and executed test plans, test cases, and test specifications for complex web and mobile applications
- ▶ Performed functional, regression, integration, and system testing across multiple product releases
- ▶ Developed and maintained Selenium WebDriver automation scripts using Java and TestNG for regression suite coverage
- ▶ Conducted API testing using Postman; validated REST API responses, data integrity, and error handling
- ▶ Managed defect lifecycle end to end: identification, documentation, prioritisation, tracking, and resolution verification in JIRA
- ▶ Set up and maintained test environments mirroring production to ensure reliable, reproducible test execution
- ▶ Produced detailed test documentation including test plans, test reports, and traceability matrices
- ▶ Collaborated with developers and BAs to investigate defects, reproduce issues, and validate fixes across sprint cycles
- ▶ Contributed to continuous improvement of testing standards, processes, and quality practices across the team

KEY ACHIEVEMENTS

- ▶ **Built Appium mobile automation framework end-to-end at Fortune4/OTTPlay — adopted as team standard, covering Android, iOS, and 6 Smart TV platforms** Framework from scratch:
- ▶ **Sole quality gatekeeper for Samsung Tizen Smart TV app certification — responsible for all quality sign-offs and store submissions** Samsung Store SPOC:
- ▶ **Configured Jenkins pipelines for continuous test execution across multiple projects; reduced manual regression effort by driving automation coverage** CI/CD integration:
- ▶ **Validated ClickPost logistics API integrations, DRM workflows, and MongoDB data pipelines across high-traffic OTT streaming infrastructure** API validation at scale:
- ▶ **Delivered test coverage across 6 Smart TV OS platforms simultaneously — one of few QA engineers in India with validated multi-OS OTT expertise** Cross-platform coverage:

EDUCATION

B.E. in Information Technology — Savitribai Phule Pune University

2010 – 2014

WHY THIS ROLE

Bayer's next-generation enterprise platform work — spanning AI-driven workflows, microservices, and global engineering teams — aligns directly with my experience owning quality end-to-end across complex, multi-system integrations. Having built automation frameworks from scratch, integrated them into CI/CD pipelines, and acted as the sole quality gatekeeper for platform releases, I bring both the technical depth and the accountability mindset this role demands.
